TRANSWORLD FREIGHT

Global Logistics Optimization

Autonomous AI agents optimized route planning and dispatch execution across a 5,000-vehicle fleet.

Key Outcomes

- 24% reduction in route latency
- 15% lower fuel consumption
- More reliable dispatch execution across 5,000 vehicles

Business Context

TransWorld Freight needed to reduce route latency, lower fuel costs, and improve planning consistency across a large multi-region fleet.

Agentix Labs Solution

Agentix Labs deployed bespoke AI agents to orchestrate routing logic, flag delays, and continuously refine dispatch decisions using live operational context.

Implementation Highlights

- Autonomous AI agents
- Real-time operational orchestration
- Enterprise-scale logistics workflow automation
